Responsive Web Design (RWD)

Adaptive Web Design (AWD)

Jalal Hejazi 2013

What is the difference between responsive vs. adaptive web design?

<http://www.techrepublic.com/blog/web-designer/what-is-the-difference-between-responsive-vs-adaptive-web-design/>

http://en.wikipedia.org/wiki/Responsive_web_design

Responsive Web Design RWD

→ Focus on CSS3, Media Query, Fluid Grid System, flexible Images, flexible videos and fluid type

Adaptive Web Design AWD

→ Focus on the 3 layers of progressive enhancement

- | | | |
|--------------------------------|---|--------------------------------|
| 1. Content layer | = | rich semantic HTML markup |
| 2. Presentation layer | = | CSS and styling |
| 3. Client-side scripting layer | = | JavaScript or jQuery behaviors |

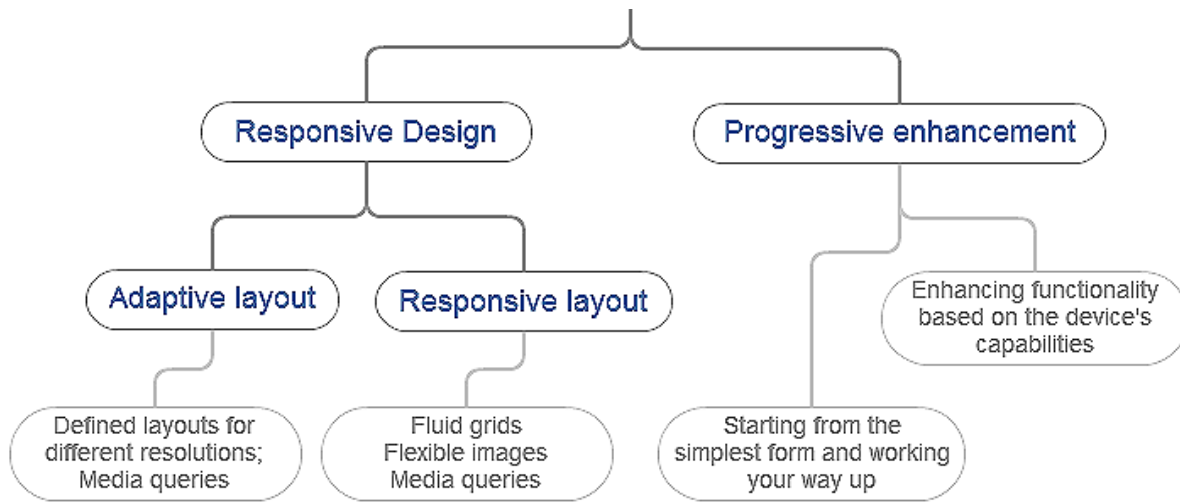

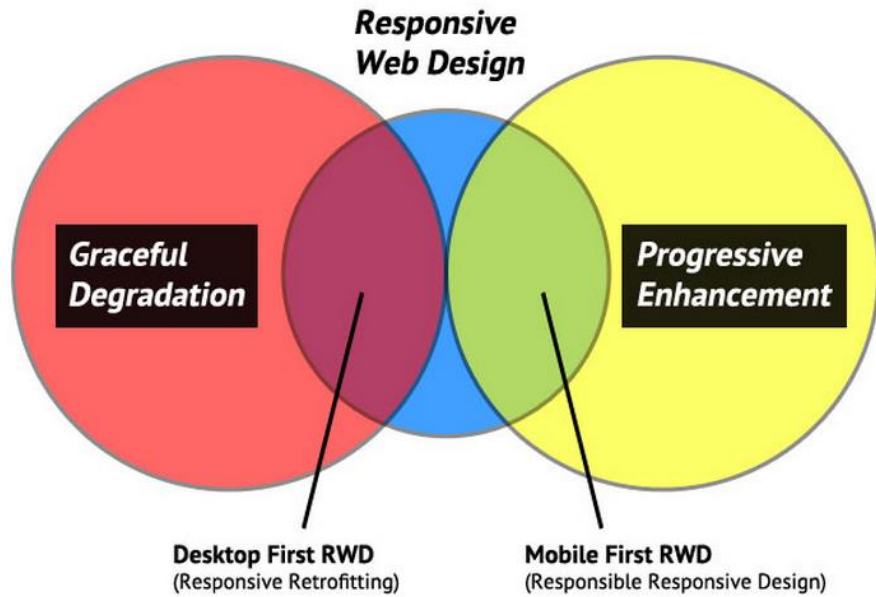

What is the difference between responsive vs. adaptive web design?

The biggest similarity between the two methods is that they both allow websites to be viewed in mobile devices and various screen sizes, ultimately providing visitors with a better mobile user experience. Where the two methods differ is in their *delivery* of the responsive/adaptive structures:

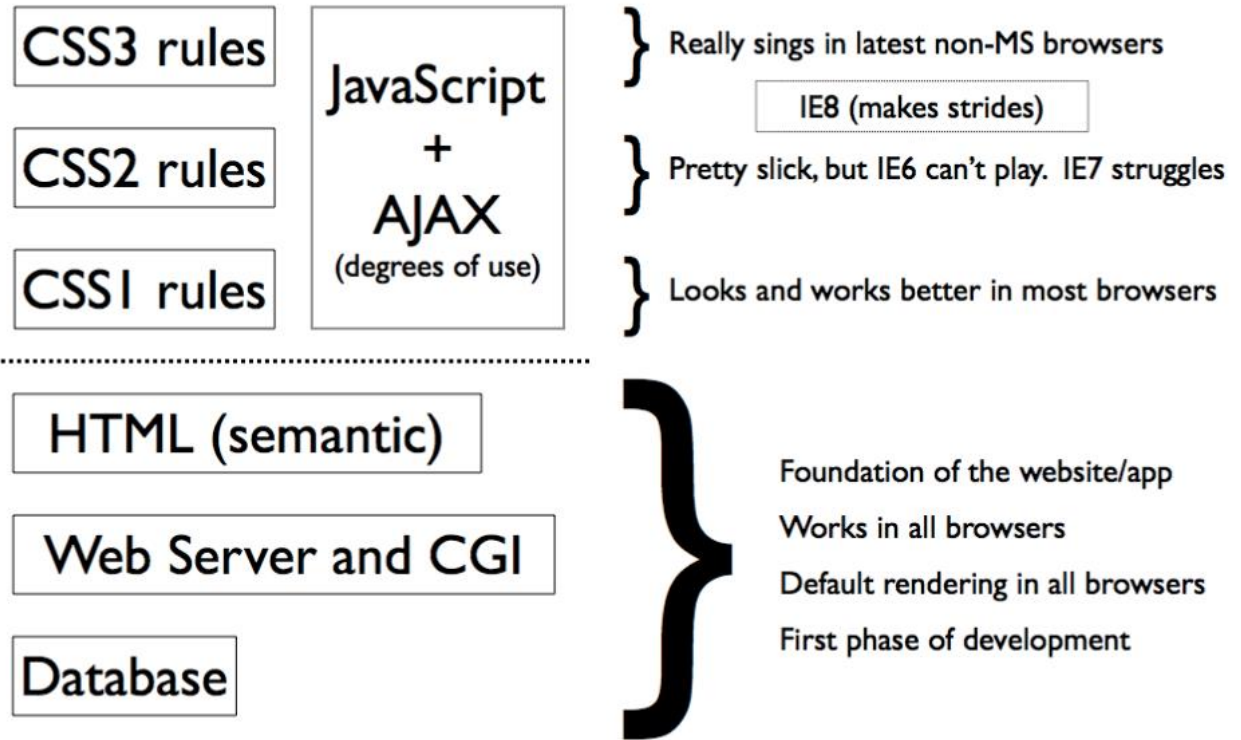

RWD relying on flexible and fluid grids → HTML5 + CSS3

AWD relying on predefined screen sizes → HTML5 + CSS3 + { scripting }

One of the main distinctions between the two is that RWD might take more code and implementation strategies with the fluid grids, CSS3, and flexible foundations, while AWD has a streamlined, layered approach MVC, which utilizes scripting to assist with adapting to various devices and screen sizes using progressively enhanced Web apps.

Layers of a Progressively Enhanced Website

http://en.wikipedia.org/wiki/Progressive_enhancement

Mobile Design
Adaptive Design
Responsive Design = **WEB DESIGN**

1. Fluid Layouts

2. Adaptive Design

3. Responsive Design

RESPONSIVE WEB DESIGN

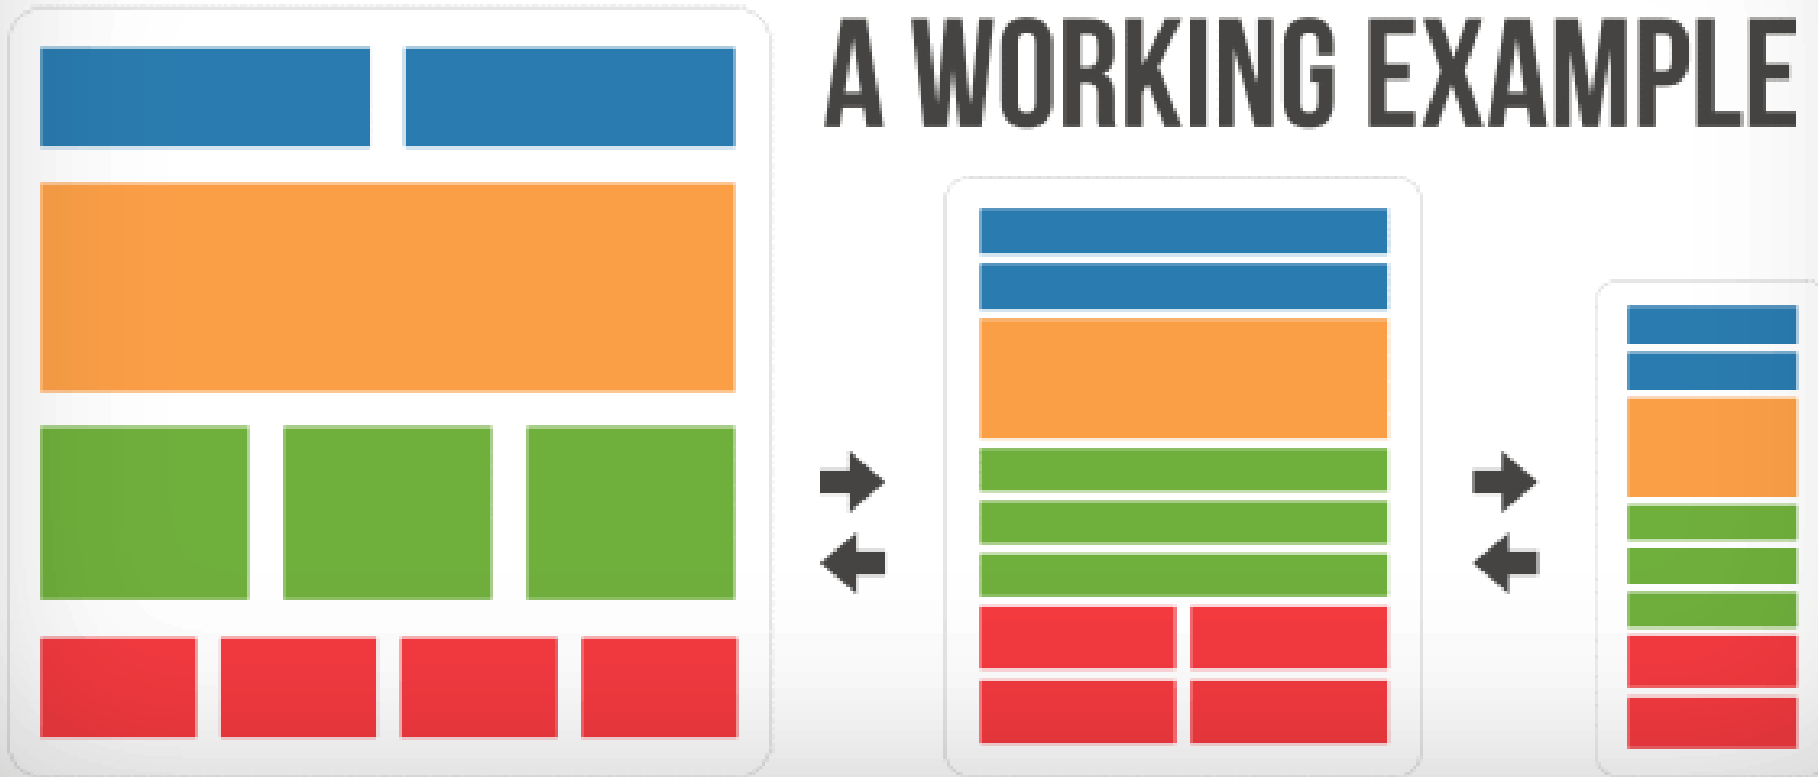

THIS IS
THE WEB.

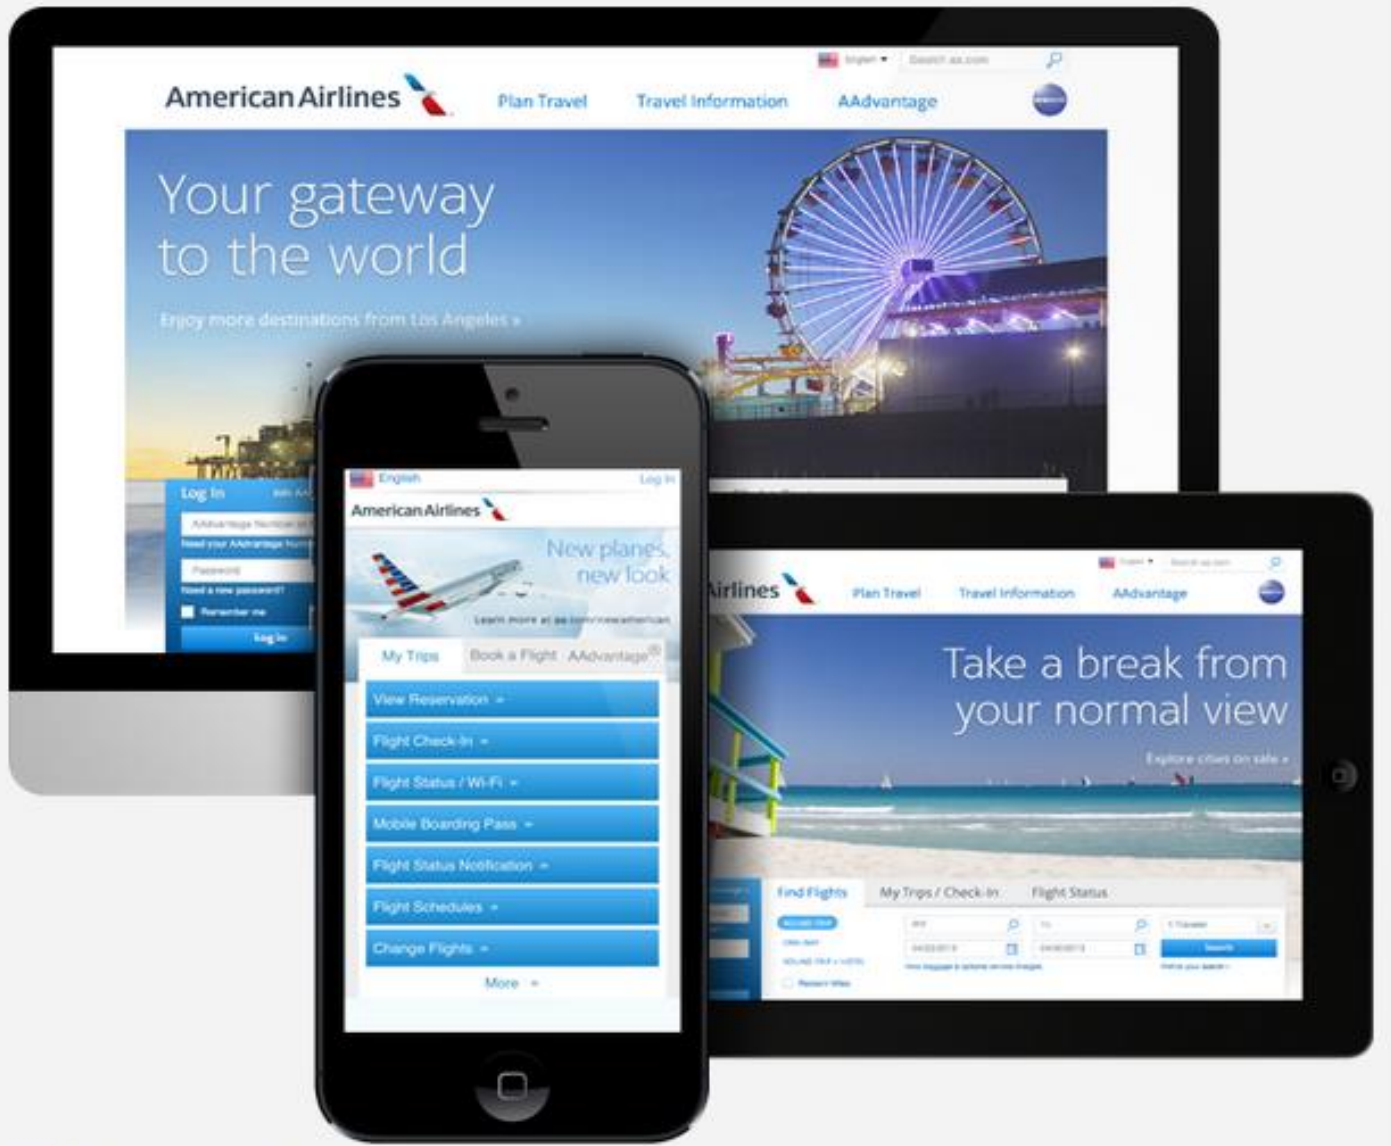

RESPONSIVE WEB DESIGN

A WORKING EXAMPLE

Responsive Web Design means the content responds to whatever screen size it is on

Adaptive Web Design means the content responds to whatever device it is on

1. *Fluid Layouts* → *limitations with viewport size*

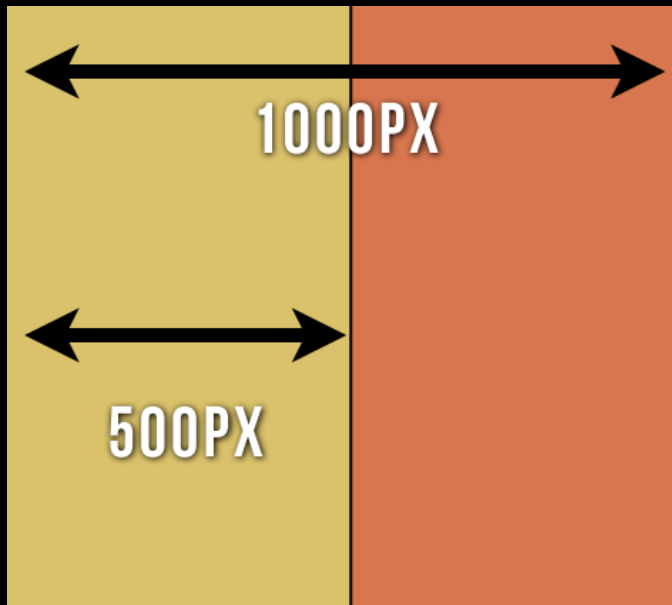

2. *Adaptive Design* → *doesn't cover universal web*

3. *Responsive Design* → *flexible and universal*

Fluid Layouts: Layouts that scale

Fixed Layouts: Layouts that are static

pixels → ems

Adaptive Web Design

Break Points

Media Queries

- *Device*
- *Screen Size*
- *Resolution*

Adaptive Web Design (Media Query)

≤ 320px width

```
@media screen and (max-width: 320px) {  
  body {  
    font-size: 100%  
  }  
}
```

Adaptive Web Design (Media Query)

≥ 1024px in width

```
@media screen and (min-width: 1024px) {  
  body {  
    font-size: 100%;  
  }  
}
```

Responsive Web Design (Responsive MEDIA)

```
img,  
embed,  
object,  
video {  
    max-width: 100%;  
}
```
